I think I can help maybe. I have listened to my Fisher 500 on my Pi Theater fours and believe me it is a very nice match. So I would investigate the Pi two's which are a smaller version of the fours and very good for the price. 28 watts are way more than enough for those speakers. You will get great bass and smooth musical mids from that combo. There are quite a few guys using Fishers and efficient speakers like the Pi's.
