Thanks Steve,I have seen linkwitzlab site but I was not aware he uses XXLS (I know he used XLS for Thor subwoofer)I have searched Internet trying to find someone who has used XXLS in ported application as suggested in Peerless homepage - but I could not find anyone tried that yet. Perhaps because XXLS is rather new. At this moment I have Scanspeak 8656 10" in 60L sealed, but, my XO is rather low (XO=80Hz) and for that application I suspect the are more suitable heavy duty elements around. XXLS 10" will fit in to small box which means I could re-use my exisitng enclosures (made by concrete) even when changing from S-S sealed, to XXLS ported.Peerless also have XXLS-versions for sealed but, it seems they require liitle bit larger box than 60LAnyway, I am concerned whether one of those XXLS would be good enough for Music, to match with my Fostex F200A mainsLageB
