Hi I have a pair of vintage Koss M/60 + bookshelf speakers that ive enjoyed over the years. The problem is the speaker driver ripped and i need some help bonding it back together. The sound is unnoticeable at low volume but when i turn it up or the music has a lot of bass i can hear the air coming out of the ripped hole and it's very annoying. Is there any kind of special glue or tape so i can bond the rip together? Thanks ahead of time.
