Dear Mark Thanks for your reply. I was able to get the crossover for Madisounds MDY-4. The MDY-4 used the 17W75EXT and they were kind enough to modify the crossover to accommodate the standard 17W75 driver. I obtained the plans to build the cabinet from a fellow I met from another posting. The MDY-4's are a .5 cuft. enclosure with a Scan Speak Aperiodic vent. I finished them in red oak veneer and Poly high gloss finish. The finished speakers sound excellent.
