Help!My house is cat6 cabled and I would like to use my computer to push Napster round the house.Can anyone pls advise:1. Can I push sound from the computer down the Cat6 cables to other rooms - how do I do this?2. Is there a quality standalone speaker that I could place in each room to broadcast the sound (don't need a display on the unit but would be good to be able to vary the volume/tone etc)?Any advice gratefully received.Thx
