You know, it's important to look at skin effect and line capacitance, 'cause if you have too much then high frequencies will be rolled off...ofcourse,but 'regular' cables have no problem with this?...wireless world article showed how 10A extension cord was good compromise between R L and C ....was interesting.so how can there be so much debate and tweaking to be done???Well have u visited sounddomain.com forum lately? it goes like this1. is this HX2 louder than thumper12?2. would air holes on my sealed box make it louder3. how much power do i need4. what spl will i get...5. can some one please design me a ported box..repeat that everyday,same questions.as if the search function doesnt exist.when i bother going in- i have jlaudio.com tutorials,and diysubwoofers.org at the ready,to simply copy and paste sentances,saves time! when 2 sites would answer the questions people want to know,its annoying.Quality of posts not quantity of posts ;-)btw nice car u have ;-)Mike.e
