Hello,I was recently wondering if not to upgrade my current speakers.After going through quite a few comparisons etc. I have picked up two resonable choices.Let me mention that I am not a musician but I do value decent quality of sound. I also would not mind if they were clear and loud enough for home parties. Unfortunately, I can't compare both sets so I need to base on your opinions, folks.What's more - ESI are about two times as expensive...Help much appreciated.
