On Decware.com I go to Tube amps---and at the bottom of the page is a tab that goes to recommended speakers for Dec Zen Amps---Omega, Fostex, Parker, Moth----on the Fostex site you will get Dave Dicks site for his speakers he makes with Fostex and you can up-grade to lowther by returning your Fostex---Dave has a different take on how to use the drivers---and for me, a novice here with no build experience, I felt like it was a good point to start--easy to build boxes that "get my feet wet"---my thinking is full range driver--build 2-3 different BR boxes and listen---maybe in the mean time build a little 5 watt Class Amp (a pair to bi-amp) and then step up to a 2-way box but bi-amp direct and then later build X-overs to see whats best ---by then I should have an idea of what sound i like and it will direct the future-----Fostex.com has some interesting boxes too Jim
