Usage will be for concerts and local Productions. I would like to generate 135 db's but am not picky as long as sound reproduction is at its best. Frequency range will be 150Hz-20kHz My midrange dirver is going to be a 15" b&c dirverI plan on buying a premade horn for my compression driver; do you think that it will be easier to build with out or with premade horn for HF driver.How can I get to adrian macks website? Thanks so much for info.Justin
