AlsoFR,is just one of the many things to measure now that you have a great flat response why not listen to a full range speaker that people love, and compare it. simplicity no x over, see if it appeals. A moderately flat response i want, but i dont want to sacrifice other things to get that. The listening room affects so much.. Its interesting to hear... I plan on building a horn system in the future ,, up to 16khz like adrian macks. :-) Cheers!!
