JLH in high eff AA talks of 1" comp drivers going 500hz-19khz..i find that hard to believe and ive never heard/seen one-id like to.(i live in NZ so no chance)it has High Le :-(low Fs :-(In hornresp i can only get a narrow bandwidth of 80-400hzTry using ML UTIL and input what horn you want-it may tell you more optimal t/s specs to look for,also i may try this another time (work now)Cheers! home
