Subject: I think the labhorn is pretty impressive already

So you want 20hz for a PRO unit event/ you wont get high efficiency from a DOORway movable horn.perhaps 100db/1watt only ...Id use the lab12 because its such high xmax,with LF youd need the excursion.The question is,do you need it,really i think a labhorn or similar will suit the task just as well. 30hz clean is very impressive on its ownCheers!
