Hi Wayne I believe this is the fruition of a project on the lab sub forum. Here is a recent post on the sub forum.<http://www.prosoundweb.com/community/read.php?board=3&id=153898>In which case it is a pair of Labsub / BT-7 shaped horns with a flare extension. This should be capable of being quite scary when finished. I don't know if you have built a proper horn with the LAB 12 yet but they are quite powerful, more so than one might expect even. I have some measurements from Eminence on the shorted turn (flux stabilized in marketing speak) driver. I will go through them tonight and let you know how they look. I should have the real thing in hand shortly. Got to run, Tom <http://www.prosoundweb.com/community/read.php?board=3&id=153898>
horn post
