Hi WayneI believe this is the fruition of a project on the lab sub forum. Here is a recent post on the sub forum.<http://www.prosoundweb.com/community/read.php?board=3&id=153898>In which case it is a pair of Labsub / BT-7 shaped horns with a flare extension.This should be capable of being quite scary when finished.I don't know if you have built a proper horn with the LAB 12 yet but they are quite powerful, more so than one might expect even.I have some measurements from Eminence on the shorted turn (flux stabilized in marketing speak) driver.I will go through them tonight and let you know how they look.I should have the real thing in hand shortly.Got to run, Tom<http://www.prosoundweb.com/community/read.php?board=3&id=153898>
horn post
