Subject: Re: Same measurement method by different results? Posted by Adrian Mack on Thu, 15 Apr 2004 13:53:59 GMT View Forum Message <> Reply to Message

It might be that the response curve/graph is measured in half space (baffle mounted) whilst the numbers itself in the sensitivity guide are in free-air, which is what the free-air referance efficiency equation I quoted tells you. Maybe you'd want to email Eminence and ask them though just to be double sure.
