Hi All Does anyone has a good suggestion on bridging the gap between the Labsub and waynes midrange horn?. I am contemplating a front loaded 100Hz horn using a 2226 15" jbl as they are at hand. the 2245 is also a possibility but its not the first driver which comes to mind when one says "midbass". Cornerhorns are definately a possibility and such is the Pi-10, albeit its rather large for a midbass horn. Cheers andreas
