Hi Wayne,Been lurking around in the background still! Currently CADing up my new horn sub - settled on Beyma 12LX60 for widest pass band and flatest response down to 30Hz or so. Am planning some high-mid horn experiments with Eminence Alpha 6 soon (hopefully within this next month) - setting up some trial phase plug designs on CAD now. Starting to get colder now here as we head towards winter, which is a bit of a pain for building stuff outdoors...CheersGraeme
