thanks for the replieswayne.....the le5 on edgarmid horn should be ok then..in the 1st order setup i'm using the 806/811 comes in a 5khz....so should be -24db by 312hz?....will it still breach its xmax with this slope...and at what kind of levelsi want to use this driver/horn combo as i can do without an actual tweeter (i think...or maybe a piezo coming in around 10k) and realise i couldn't junk the 806/811 and use say a jbl 2405 above the le5/edgarmid without going to a higher order crossover.it's for home use so mega spls not req'dwill it fry.....what do you thinkcheersgary
