when i fold horns,i start at the mouth,choose a maximum depth,folding according to that,for midbass cutoffs normally 2folds are enoughLately i prefer the S style,for woofer access. my 40hz corner horn,its folded more like the labhorn but expands in 1 dimension not 2.for my jbl horn 3folds are more optimal,no space wastedsee my site.http://www.geocities.com/basshornguy/good2.PNGlabhorn.
