Sometimes he actually does provide a little insight, despite all that's wrong. I looked at the CV site and it's the only one in the line that's been discontinued. I wonder if there isn't something inherent in the design that's problematic. Interestingly, I would have thought it would be the most rigid of the cabinets given its shape and mouth bracing. Perhaps it is rigid, but just resonant. Why not contact CV support? Maybe they can give you some guidance.
