Subject: Opinions needed: Aluminum or Pascalite?

I just bought a pair of Altec 908 (1") drivers, with Symbiotek diaphragms, for my horns and need some opinions about the "best" diaphragm for them. (I know there is no "best", but i want your opinion anyway) I've read that the Symbiotek diaphragms don't go very high in frequency, and I want to use these horns without a supertweeter. So which way should I go: aluminum (902) or pascalite (909)? Titanium? Unobtanium? What do you think?
