Subject: That really doesn't seem to hold water Posted by wunhuanglo on Thu, 14 Oct 2004 22:55:33 GMT View Forum Message <> Reply to Message

A bell "rings" as it vibrates at its fundamental resonance. The clear bell, or any horn, is quite capable of having its first resonance excited by the acoustic wave it is conducting. Describing it as "metallic" may be inaccurate, or reflect a prejudice, but the resonance can certainly exist.
