Hi Roland, Most of the Eminence 10's are tuned like this. They're really midrange/midbass drivers and great for horns or direct radiating mids. They have small Vas and low Qes so the boxes are tiny and bass response isn't very deep. Pialign recommends a 0.368ft³ chamber tuned to 86Hz, and BoxPlot recommends half this size at about the same tuning, 0.19ft³ at 91Hz. The PiAlign'ed solution has f₃ of about 95Hz and the BoxPlot tuning has f₃ of about 120Hz. With a subwoofer,

35Hz. The use in corners will help the response a lot. Another alternative is the Alpha 10, which will allow you to tune the system for much deeper bass, albeit in slightly larger cabinets. The Delta 12LF is another possible candidate for you, provided you aren't opposed to using a little bit larger speaker. Wayne
