Subject: Improve Bass

I have a pair of Belle Klipsch speakers driven with Quicksilver Horn Mono Amps and an Antique Sound Lab preamp. My room is very bright and consequently the bass response is poor. I cannot change the room configuration nor the decor. I have tried a subwoofer but it was incompatible with the preamp to the point the preamp blew. In fact the overall sound was worse when I added the sub-woofer. How can I improve my bass response down to a reasonable, say 30Hz?
