Hi,I have opted for a Em. Gamma 15" in ~ 100L pi-aligned plus the BMS 4540ND. They both look reasonably smooth. If I use a 2nd order textbook crossover and attenuate the 4540ND appropriately, I should be all right no?X-over point 1900Hz as per BMS recommendation.Any tricks you would like to share? Which horn would you use for the 4540ND? It's supposed to be for home hifi.Thanks,Roland
