Thanks for the response. I didn't mean to say I only wanted to use those driver, I meant to say that if I could use one or more that would be nice (less $$). Really, I'm very open to ideas. I did like the pi's from an efficency standpoint, also for dynamics, but the size was pretty darn big and the imaging wasn't what I wanted. One alternative I've considered, and played with, it using a sub on the music below, say, 60hz.
