For a 15" horn driver there are alot of considerations such as the electrical impedance at the crossover point, the optimum throat size, mass rolloff, etc., but for a "general" butt-kicking horn driver, I'd start with the Eminence OMEGA PRO which is pretty astonishing as to its upper frequency rolloff while still providing butt-kicking bass in a horn. But it really depends on what you are doing or are trying to do. However, it will shake apart less-than-"well-made" cabinets. Find out how good your cabinetry really is.DM
