Normal Delta 10A is not so suitable as the resonance freq. is a little higher than I need. Delta 10A, $f_s=66\text{Hz}$. At this freq. I cannot get the bass low enough for a 2 way to sound decent. The neodymium magnet technology used in Deltalite, what you think of it? will it affect the midrange which eminence is famous for? Any idea? Thanks for your input.
