Hopefully he comes around here. Anyway, I'm considering the 416-8c for 6 cubic foot BR crossed at 400hz to an Audax PR170MO. I've read you preferred the 2226H crossed at 1600. Have you tried the 416-8c at lower crossovers? How did you like articulation on either? I used the 2226H for a few years in the late 90s early 2000s and although it was smooth I thought it like a bit more power than I could listen to when the family was home. Any thoughts from anybody are welcome!! Scott
