Hi akhilesh,Thanks for the port length calculation. I've been switching back and forth between a 2.75" and 0.75" (no tube, just wood thickness). The 0.75" sounds a bit thin and the 2.75" slighly exagerates some notes, so 1.6" may be a good compromise. I have some extra port tubes at home, so I'll give it a try.I should have the new baltic birch rear baffles mounted up this weekend. I'm curous as to the effect. Switching the front baffle from MDF to baltic birch was a step-up.I will report back with results soon.DaveJ
