That is exactly what Martin replied to me to do in his "Lowther design" (I think) and is exactly what others (Akhelish!) said would ruin the "magic" of the driver as a FRD ---I think it's still important to build and listen and thereby get the experience in what sounds like what---otherwise it tends to be a discussion with no conclusion-- These Martin "Lowther" Br box looks pretty easy and straightforward to build too----and it would allow me a good test --#1 build and run without the filter --test # 2--install the low end filter---might build it with a switch to be able to turn on and off the filter---Jim
