Subject: Pipe speaker update Posted by Ion on Sun, 29 Feb 2004 08:28:21 GMT View Forum Message <> Reply to Message

I fooled around with the pipe speakers a bit... got hookedlistening to things like the Pipe Dreams program (organiecitals from all over) and space music like Tangerine Dream. After trimming down the size to about 5 ft each, I splicedanother pipe length back in and now have one about 7-8 fttall. They still have just the Radio Shack 4in driver butthey look a bit whacked in the living room here. ;-) Sound is way interesting though... not even any stuffing inthem. The most I ever put in was a light amount about halfthe length to tame a bit of the echoey effect from voiceannouncements. But cosmetics is an issue with rascals like these: My idea was to hand curtain material in panels in frontof each from the ceiling... some sort of track that canhold curtain hooks. That material would be as sound neutralas possible and try to be a close match with the windowdraw-curtains (standard apartment variety.) I wonder how these differ from the setups where the open end is at the top ratherthan the bottom (?) sonotube(tm) They had a bit of a discussion in the Melhuish forum about whether sound was affected by gravity. Terry Cain became a bit colorful and poetic about it. If the link is bad, go through homepage. James has changedsome things.

Sample PVC pipe speakers like the ones I made
