I agree wayne, at the frequencies I am tailoring it at, it is not a BSC circuit anymore, more a response shaper. Result is very pleasant. AS "live" as my Khorns, except the bass is only down to about 50-55 HZ, whereas the K horns do gove bass to about 35-40 HZ. But the imaging of the single drivers is superior, and in a small room (like mine) they are nice!-akhilesh
