The link below references Yamamura/Lowther as the possible project originator. Project cost in time and materials is likely significant. A project a couple years ago in Speakerbuilder featured aproduct called Kerfkore which had kerfs precut into the the sheeting for bending purposes. Timberflex(tm) is also referencedas a source of forming bends. http://f18.parsimony.net/forum31999/messages/67487.htm
