Bill, I have the 206's in Kings design ML TL---I'm researching what other driver to install in that cab as the 206's are moiving into the new horn cabs---an got to looking at Bob's 167 design--not a bad cost factor to experiment ---the 167 can have a phase plug installed ---wondering the diffrence ---or rather if there would be that much diff in these two speakers??? I am looking into the parameter sheets to see how similar these drivers are---what is your time line to making the Brines ?? Jim
