Hi, first I'd like to thank Wayne Parham for directing me to this site. Somewhere in my piles of audio literature I have the plans for a small 8 inch horn enclosure from Popular Science, 1963 called the Mello Monster. It would be perfect for a 8 inch Fostex FE207E co-ax. Until I find it, it could be built with 2 sheets of plywood, I was wondering if anyone out there had ever run across the plans, thank you Mark Korda (mark.korda@verizon.net)
