Hellooo Down There, Are you wanting to do a hobbyist build or buy stuff? Like Wayne said, if you can get to a meet that would be great. Prob'ly the best kit that I've seen is the BK16 from Madisound, though Wayne may have some other suggestions. Up in the General Forum there's a few remarks about a book called Speakerbuilding 201 just released from Old Colony and the audioXpress mag. I have a thing for Voigt Pipes and would like to do that build but for now, there's a smaller design called the MLTL (Mass Loaded Transmission Line) that I built from shelving sold at the (put your Home Depot equivalent here.) It's the best build I've heard, but, well I've mostly only heard my own. MLTL is a ported design found at the Single Driver Website where one of the regulars provided the specs for a build with the Fostex FE127e. I'm still experimenting with the tuning from what was given by GM, the author. The MLTL has also been used with the Jordan JX92s which is thought of highly in full range speaker circles.
