Hello out there, new member here. I recently aquired an old pair of speakers that contained Foster drivers, A full range woofer (no model # with me ) and 2 Dome tweeters that have the following info on them; 035N03-16 which I believe is model # and #616 stamped separately. They are rated @ 8ohms and 45 watts. The dome is a treated black and is fabric 1.5" dia. Magnet is 3.5"dia x1" thick. Mounting plate is 5.25"dia and whole unit is black.Can anyone out there shed some more light on these as far as quality goes and/or comparable itemsThese came out of Sears Professional Series cabinets, believed to be from early 70's. No model # on these either. Thanks
