Thanks for your prompt answers. Yes, i build my BR boxes myself. I used as reference the small BR fostex recommended enclosure, keeping the volume(9L) and cross sectional area, but i "customized" them with rounded walls (Sonus Faber style !). Hard time to do this, but in fact i'm quite satisfied by the AESTHETIC result. Then i tuned the port using Bassbox software, around 70-75Hz. I used MDF 19mm with 3 coats of blackson (car damping painting). Plus fiber layer i'm still trying to adjust. At that time, i had never heard of MJ King, Bob Brines or TQWT... That why i'm trying to get a better result, using modern designing theory ! 55Hz would be nice !
