Hi Peter, While I don't have anywhere near the level of experience or knowledge Martin has, I'll throw in some things. 1. I would definitely recommend you try Martin's design for the 206. This is totally passive. As someone who has tried active & passive crossovers, I would say I prefer active, but that's only for my setup. In the right setup, passive can be as good. Parametric equalizers are WAYYY better than graphic ones for almost any application. For your applications, a parametric equalizer would work, but not a graphic one. I would recommend that you try the passive eq that Martin does, and keep your signal path simple to start with. If you are just using one driver, then there is no choice but to use passive components or a parametric EQ. -akhilesh
