pecker. Eighty five point something dB. Yah, so are the Tang Bands, but at twelve clams you can gang up. This thing's ninety bux a copy. Other than the sensitivity, it looks very good, though; highish Q_t and X_{max} , lowish V_{as} , bloody nice looking response graph, F_s 50Hz below the Tang Band. If you have some amp power (I don't), very attractive. Aloha, Poinz
