Bob, Are there any speakers available that are 6 or 8 inch two ways, tuned to 40-50 Hz, that do a better job with dynamics than a similar sized full range design? Is the problem inherent in the size of the driver or is it particular to full range drivers with low Xmax? I am not sure it is fair to compare a two or three way design with a bigger woofer diameter with a 6 or 8 inch full range driver. I really don't know the answer to this question, I don't get out very much to listen to other commercial speakers or to other DIY projects. Martin
