Has anyone used or heard the Ciare HX-201 10" wideband driver? It looks like a good candidate for a crossoverless mid-bass driver for a 3-way speaker system. It would be nice to find a good wideband driver that does not use a whizzer cone and can extend to around 8kHz. At least without shouting due to peaks around this frequency, like most of the larger wideband drivers do that do not use a whizzer cone. Any input will be appreciated. Norris Wilson
