I would STRONGLY recommend supertweeters. Here are some points to consider: 1. Get dome supertweeters that go up to 25,000 Hz at least. 2. Cross them above 3500 Hz for no loss in imaging that you will be able to hear. 3. No they will not consume much power. How much power do you think it takes to drive a small dome like that? Almost none! 4. The crossovers you use may consume some power. If you go with a simple 6db/octave low & high filter, and get the crossover points right, my guess is you will have a much better sounding system. -akhilesh
