Here are some options: 1. Vifa tweeter dome from parts express, look for one around 96db/1T is 8 ohms. I forget the part number, but it retailed for around \$26. I use that one with great sound. 2. I don't think the impedance will matter a whole lot. All else being equal, go with 8 ohms. 3. You can measure your 206 rolloff and then put in an appropriate high pass only crossover, with the requisite slope. If the slope is > 6 db, it may complicate things in terms of phase. But, at the frequencies you are talking about, it won't matter. Just put a 1.5 μ F cap in series with the 8 ohm tweeter to begin with. -akhilesh
