Hi Chris, My experience with Fostex/foster drivers is that they sound very good in a BR box, 1 cubic foot tuned to about 80 Hz, and crossed with a sub at around 90-100 Hz. Also, some of them tend to be very PEAKY / STEPPY over 3000 Hz, in which case you could use an active filter or even put it in a 3-way system. If you put in a 3-way, and use passive components, the tweeter cutoff should be way higher than the mid cutoff. Let us know how you like it! -akhilesh
