Hi everyone, My next potential project is an open baffle design coax. I am looking to do a 15" coax (a set of old alnico Univ sound drivers I have) in an opwn baffle. What should I be looking for? I glanced at Linwitz's pages, but they are way too detailed for me. My basic questions are: 1. Do i need to look at T/S params for this? 2. How do I calculate the dimensions of the baffle? Do I need the response curve? thanks for your advice. -akhilesh
