The 22" wide baffle doesn't belong to me, but is the one I listened to at Darrel Hawthornes home. It has two inch deep braces on each side and is 36 inches tall. My own baffles are 19 inches wide with 6 inch tapered wings. 36 inches high. I am planning a baffle around 22 inches wide with no wings but will have round tubes on each side for diffraction control. It will be a bit shorter as well. Haven't decided on final height yet. On my present baffles, I have a pair of 15 inch Augies that are biamped. These extend the bass down to a flat 30 Hz. All on the same baffle described above. No eq. Dave
