Hi, I own a couple pairs of these drivers, and run them in a PAWO horn. I have heard these for a while, in different configs. Here are my suggestions: 1. these will go down to 45 Hz in a PAWO horn, but will have excessive IM distortion, as well as a pronounced high. Crossing them actively at 80 Hz or even 70 Hz, dramatically reduces the IM distortion, and smooths out the highs. Run this way, they sound very, very good, esp in a small to medium size room. Of course you need a good sub. I would recommend subs by Hsu research. Material: Use 3/4" to 1" thick Baltic birch or MDF. I wouldn't use anything else. I don't think these are dust magnets... I have serious allergies too. You have a great set of drivers, Enjoy them!
