HI, Have you tried a wide range driver? In my listening experience, if say 80 hz till about 3500 Hz are covered by one driver, the loss in coherence is really small, but the gains in frequency extension, beaming loss & efficiency, at least in my opinion, more than make up for it. I have never heard the f200A, it looks fantastic on paper in terms of freq curve & Freq extension, but the lack of efficiency bothered me somewhat. Also, it will have serious beaming over 2000 Hz, just because of its size. -akhilesh
